## Victory 4 Victoria

Victoria Feldman is 5 years old and has been diagnosed with Medulloblastoma (malignant brain tumor). After surgery she developed posterior fossa syndrome which robbed her of all her mobilities except breathing. Thus far she has completed 30 radiation treatments along with intense physical, occupational and speech therapies to regain what she lost. Victoria will be starting chemotherapy in February for one year in addition to her therapy treatments. Please keep Victoria and her family in your thoughts and prayers.
